NOTES

All illustrations shown are for 7' wide and 7' high single doors and 14' wide and 7' high double doors.

Sizing: Sizes shown refer to inner frame dimensions. To measure for a garage door, use the inner frame dimension - do not measure the existing door. For further Premiere steel door sizes, see the 'made to measure' section on pages 4 & 5. Corinthian and Minster doors under 2080mm wide have three panels, not four (see Doric and Victoria).

Finish: Henderson Premiere steel doors are supplied with a factory applied matt White primer coat to allow the homeowner to apply a finishing coat to complement the colour scheme of their home. Factory applied deep textured fully finished White is available as an option (see table to right).

Operating gear: Premiere steel doors are available with a choice of canopy, tracked or Optimizer operating gear. The choice of operating gear determines the position of the door handle. On doors with canopy gear, the handle is located approximately one third down from the top edge of the door. On doors with tracked or Optimizer gear the handle is approximately one third up from the bottom edge. All tracked doors over 7'6" (2286mm) high incorporate heavy duty operating gear. If you wish to add a remote control system to your door, we recommend you order a door with tracked or Optimizer gear. We recommend that all doors over 7'6" high should use a Henderson remote control system.

Standard Security: All Henderson canopy doors are fitted with two point sprung lever action locking and supplied with two roller spindle restraints as standard. Henderson tracked and Optimizer doors are supplied with four point sprung lever action locking as standard.

OPTIONS AVAILABLE

FRAMED DOORS

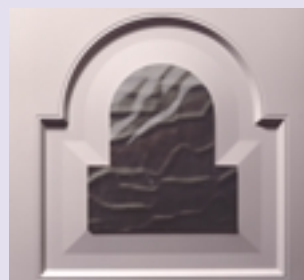

Premiere steel doors can be supplied with a 76mm box section steel frame. 7066 and 7070 canopy doors are also available with a 60mm narrow fit aluminium frame.

VISION WINDOWS

CORINTHIAN/DORIC

Corinthian, Doric, Minster and Victoria doors can be supplied with patterned vision windows to allow natural daylight into the garage.

MINSTER/VICTORIA

LOUVRES

If the garage has a requirement for ventilation, louvres can be built into the door to allow air to circulate throughout the garage.

OPTIONS AVAILABLE

Note: Single doors are sizes up to and including 9ft (2743mm) wide. Doors over this size are classed as double doors.
